## Introduction

WeRateDogs is a twitter account that is notoriously known for rating other's people dogs in a fun and humorous way. the rating have the particularity of always having the numerator > denominator as a way of saying that all dogs are good and deserve love. This is what we will be seeing today. we will see some graphs and explain what they mean

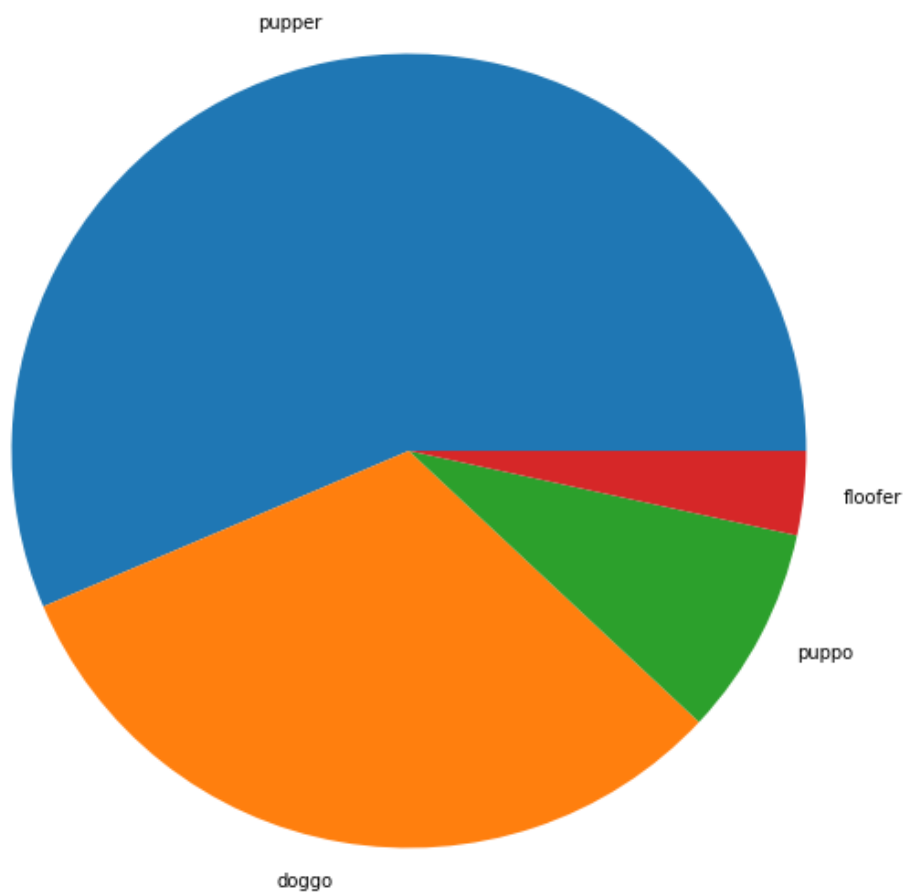

As we can see in this histogram, the twitter page is very popular and have a lots of retweet (the average is 2969)

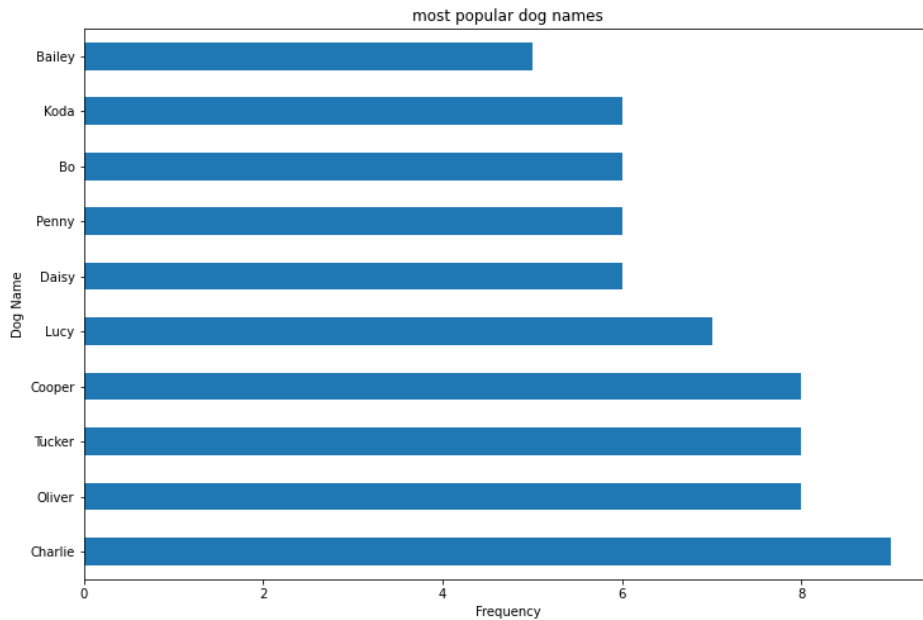

This also confirm what we tough, the twitter page WeRateDogs is very

Popular and its numbers are very honorable, this is probably because dogs are internationally loved, thus giving the page a very big audience that might be interested in its content.

In this pie chart we can see that the puppies are the most represented in our dataset, probably because puppies are more cute and thus generate more traffic to the page

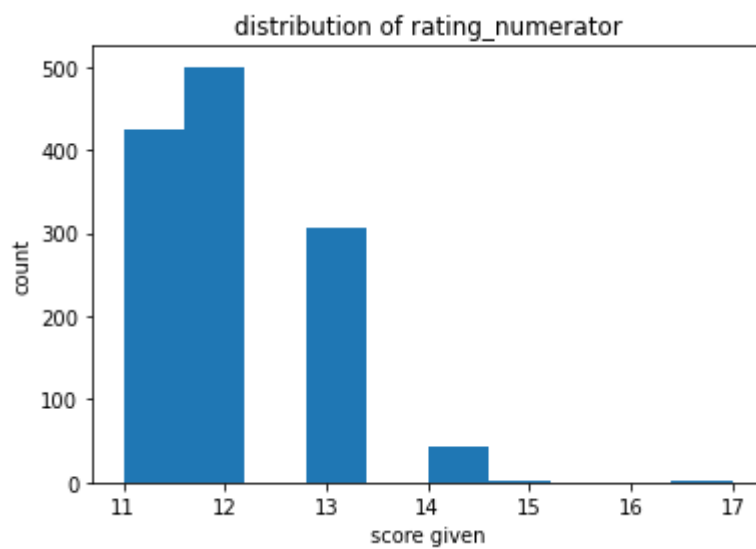

This graph is an horizontal bar plot and it represents the most present name dogs in our Dataset

The most predicted breed of dogs by the NPL used is the golden\_retriever, this is very logical since the golden is one of the most popular dogs in the world

This is the image of the dog which has the biggest score in our dataset (17/10),sadly this beautiful dog does not have a name in our database

In this histogram we can see that all dogs have more than the maximal theoretical score,this is because all dogs are good\_boys(almost)
